

Stopping power that keeps you looking good.

Evolution® Boxes **MWV**

Patent-pending Evolution and Evolution2™ Boxes are produced using specially developed, proprietary equipment that combines decorated carton grade SBS tray blanks with chipboard stiffeners, resulting in rigid set box quality at a lower cost.

Evolution Boxes are glued on all four sides and shipped fully erected, ready for filling.

The Evolution2 is shipped flat, so up to three times more than similar set boxes can fit on a truck, providing significant supply chain efficiencies and fuel cost savings. When ready for assembly, Evolution2 can be quickly and accurately set up by hand or automatically assembled by standard tray forming equipment. Both options produce strong, square cartons with clean straight lines. We offer custom sizes and all the printing and decorating options as with our premium quality folding.

Features and Benefits

High-End Substrates

Specialty paperboard or metallized film laminated substrates can be used.

Refined Surface

More substantial paperboard printing surface eliminates the roughness of chipboard from showing through.

Superior Printing

Better print-to-box registration than set boxes.

Lower Cost Premium Look

Unique, more efficient manufacturing processes.

Flexible Visibility Options

For visibility, boxes can be windowed or printed. Plastic sleeves can top-off one-piece trays.

Cost-Effective Solutions

Our hybrid packaging products provide the prestige look and feel of rigid set boxes at a lower cost.

Fit Your Shape

Custom sizes and all the printing and decorating options as with our premium quality folding.
