

PRODUCT DATA BULLETIN

Description and Typical Applications

Nuchar AquaGuard is a high-activity, abrasion-resistant, granular activated carbon specifically designed to remove chloramine, chlorine, and other undesirable chemicals from drinking water. AquaGuard is specially processed to produce a high-purity product with low ash content, low soluble iron, and a pore structure that is optimum for a wide range of treatment applications. The low apparent density of AquaGuard can offer significant advantages in many granular carbon applications utilizing canisters, vessels or carbon block. AquaGuard meets the food-grade quality of activated carbons as defined in the current edition of the Food Chemicals Codex and is Certified to NSF/ANSI Standard 61 and Standard 42.
