
PRODUCT DATA BULLETIN

Description and Typical Applications

Nuchar RGC is a high-activity abrasion-resistant, granular activated carbon specifically designed for efficient performance in purifying a broad range of liquid streams including sweeteners, pharmaceuticals, and chemicals. RGC is specially processed to produce a high-purity product with low ash content, low soluble iron, and a pore structure that is optimum for a wide range of applications. The low apparent density of RGC can offer significant advantages in many granular carbon gas and liquid applications utilizing canisters, vessels or carbon block. Nuchar RGC meets the food-grade quality of activated carbons as defined in the current edition of the Food Chemicals Codex and is Certified to NSF/ANSI Standards 42 and 61.
